The University of Pittsburgh Medical Center’s one-year accredited Transplant Hepatology Fellowship prepares trainees for a successful career with ABIM certification in the field of transplant hepatology. Excellent training is provided in advanced liver diseases, immunosuppression and all aspects of transplant hepatology through educational collaborations with the UPMC Center for Liver Diseases and the Thomas E. Starzl Transplantation Institute.

The UPMC Liver Transplantation Program is one of the largest programs in the United States for liver transplantation and includes living donor liver transplantation. In addition to liver surgeries, kidney, pancreas, small bowel, heart and lung transplants are performed as well.

Eligible candidates must complete an accredited three-year gastroenterology fellowship program prior to a July 1st start date for this one-year advanced fellowship. Applications are being considered currently for 2019.
